

*BITO present their innovative heavy duty container series SL on the world's largest transport and logistics exhibition **transport logistic***

For big deals

Meisenheim, 24 March 2011 – At the transport logistic 2011 (held from May 10-13, 2011 in Munich), BITO-Lagertechnik Bittmann GmbH, the internationally operating storage specialist headquartered in Meisenheim (Germany) will present a new generation of heavy duty containers from polypropylene. The 800x600 mm container for load capacities of up to 500 kg opens up new possibilities in production, storage and transport logistics. The most obvious advantage is that the own weight of this hardwearing allrounder for very heavy duties of up to 500 kg is much lower than the weight of same size mesh box pallets or steel sheet containers, making the new SL86 the ideal container to fulfill lean production requirements. The excellent rigidity allows high stacking loads of up to 1500 kg for dynamic use and 1000 kg for static use.

The trade show is also the ideal platform to present BITO's longstanding experience and in-depth knowledge as a full service provider in the field of storage, product handling and order picking. BITO is not only strong in designing successful product innovations such as the new PROMotion shuttle, a battery operated and remote-controlled lane vehicle to facilitate pallet handling and transport within a pallet racking installation. Or in making decisive improvements on memory based steering systems for mobile shelving and racking. The BITO team will also present their ability to handle projects from concept to completion. With a strict focus on customer needs and competent advice – whatever the scale of the project or the complexity of the storage solution.
